## Houston-The WoodlandsSugar Land

## Housing Affordability Outlook

# Houston-The Woodlands-Sugar Land Housing Affordability Outlook 4Q2022 

## About this Report

Texas Real Estate Research Center economists continuously monitor many facets of both state and local housing markets. Houston-The Woodlands-Sugar Land Housing Affordability Outlook summarizes significant housing activity and trends as related to affordability in the Houston-The Woodlands-Sugar Land MSA. Home prices reflect single-family existing homes unless otherwise stated. This report does not seasonally adjust home prices.

This publication is designed to be a one-stop resource for information on housing affordability for potential homebuyers in Houston-The Woodlands-Sugar Land. We hope you find them as useful as we do. Your feedback is always appreciated. Send comments and suggestions to info@recenter.tamu.edu.

Dr. Clare Losey, Dr. Harold D. Hunt, and Reece Neathery

## Purchase Affordability

Affordability remained low in 4Q2022 amid higher mortgage interest rates and still-elevated home prices. Year-over-year (YOY) growth in both the median and first-quartile sales price was modest, at 3.6 percent and 3.1 percent, respectively (Figure 1 and Table 1). ${ }^{1}$ The YOY increase in family income followed years of significant rises (Table 2). The growth in median home price was outpaced by a substantial rise in median family income, at 13.8 percent.

The rapid rise in mortgage interest rates continued to diminish home purchasingpotential. Rates averaged 6.66 percent in 4Q2022, up considerably from 2Q2022 and 3Q2022, which averaged 5.27 and 5.62 percent, respectively (Figure 2). All other things being equal, lower (higher) mortgage interest rates translate into lower (higher) monthly mortgage payments and ease (diminish) purchase affordability. The Federal Reserve is widely anticipated to raise the federal funds rate an additional 75 basis points in 2023 to reduce inflationary pressures. Expectations dictate that mortgage rates will continue to dissipate slightly before settling in the 5 percent range. For more information on the effect of mortgage interest rates on purchase affordability, see "How Higher Interest rates Affect Homebuying" at https://www.recenter. tamu.edu/articles/tierra-grande/How-Higher-Interest-Rates-Affect-Homebuying-2339.

## Repeat Homebuyer

Despite moderating home price growth, the gap between home price and family income remained wide in 4Q2022. For households earning the median family income for Houston-The Woodlands-Sugar Land in 2022 ( $\$ 90,100$ ), the median sales price for 4Q2022 was not affordable to them unless the home price-to-income multiplier met 4 (Table 3). Only 34.2 percent of homes sold in 4Q2022 were affordable to households earning the median family income with a home price-to-income multiplier of 3 (Table 4). Households would have to earn upward of $\$ 106,000$ annually to be able to afford the median sales price $(\$ 320,000)$ with a home price-to-income multiplier of 3 .

Table 3. Maximum Home Price Affordable by Family Income and Home Price-to-Income Multiplier

## Mortgage Interest Rate

Holding home price constant, the total monthly mortgage payment increases as the mortgage interest rate increases (Table 5). At a 6.66 percent rate, this payment was $\$ 2,712$ for the medianpriced home in 4Q2022, over twice the total monthly mortgage payment for the median-priced home in 4Q2011.

Table 6 shows the home price-to-income multiplier by mortgage interest rate. A 6.66 percent interest rate translates into a home price-to-income multiplier of $2.95,{ }^{2}$ meaning a household could afford a maximum home price of 2.95 times its annual income. The home price-to-income multiplier declines as the mortgage interest rate increases.

The income required to qualify for a loan with a 6.66 percent mortgage interest rate was $\$ 108,472$ for the median sales price in4Q2022 (Table 7). An estimated 45.5 percent of homeowners in Houston-The Woodlands-Sugar Land could afford the median sales price in 4Q2022 with a 6.66 percent interest rate (Table 8), a decline of over 25 percentage points from 4Q2011.

Map 1 depicts the percentage of repeat buyers who qualified for a mortgage loan with an interest rate of 6 percent in 2011, and Map 2 shows this percentage for 2022. Map 3 shows the percentage change from 2011 to 2022. The most substantial declines were in Austin-Round RockGeorgetown, Dallas-Fort Worth-Arlington, and Sherman-Denison.

## Loan-to-Value Ratio

Holding home price constant, the total monthly mortgage payment increases as the loan-to-value (LTV) ratio increases (Table 9). For an 80 percent LTV ratio, the mortgage payment was $\$ 2,712$ for the median sales price in 4Q2022, over twice the total monthly mortgage payment for the median-priced home in 4Q2011.

Table 10 shows the home price-to-income multiplier by LTV ratio. An 80 percent LTV ratio translates into a home price-to-income multiplier of $2.95,{ }^{3}$ meaning a household could afford a maximum home price of 2.95 times its annual income. The home price-to-income multiplier declines as the LTV ratio increases.

The income required to qualify for a loan with an 80 percent LTV ratio was $\$ 108,472$ for the median sales price in 4Q2022 (Table 11). An estimated 45.5 percent of homeowners in Houston-The Woodlands-Sugar Land could afford the median sales price in 4Q2022 with an 80 percent LTV ratio (Table 12), a decline of over 25 percentage points from 4Q2011.

## Debt-to-Income Ratio

A 30 percent debt-to-income (DTI) ratio translates into a home price-to-income multiplier of $2.95^{4}$ (Table 13), meaning a household could afford a maximum home price of 2.95 times its annual income at that interest rate. The home price-to-income multiplier increases as the DTI ratio increases.

The income required to qualify for a loan with a 30 percent DTI ratio was $\$ 108,472$ for the median sales price in 4Q2022 (Table 14). An estimated 45.5 percent of homeowners in HoustonThe Woodlands-Sugar Land could afford the median sales price in 4Q2022 with a 30 percent DTI ratio (Table 15), a decline of over 25 percentage points from 4 Q2011.

## Property Taxes and Insurance

Holding home price constant, the total monthly mortgage payment increases as the annual costs of property taxes and insurance increase (Table 16). Assuming the cost of property taxes and insurance is 4 percent of the home price, the monthly mortgage payment was $\$ 2,712$ for the median sales price in 4Q2022, over twice the total monthly mortgage payment for the medianpriced home in 4Q2011.

Table 17 shows the home price-to-income multiplier by the costs of property taxes and insurance. A 4 percent property tax and insurance rate translates into a home price-to-income multiplier of $2.95,{ }^{5}$ meaning a household could afford a maximum home price of 2.95 times its annual income. The home price-to-income multiplier declines as the costs of property taxes and insurance increase.

The income required to qualify for a loan with property taxes and insurance at 4 percent of home price was $\$ 108,472$ for the median sales price in 4Q2022 (Table 18). An estimated 45.5 percent of homeowners in Houston-The Woodlands-Sugar Land could afford the median sales price in 4Q2022 with property taxes and insurance at 4 percent of home price (Table 19), a decline of over 25 percentage points from 4Q2011.

## Table 16. Total Monthly Mortgage Payment for Repeat Buyers by Additional Homeownership Costs

## First-Time Homebuyer

Higher mortgage interest rates and a sustained high first-quartile sales price constrained purchase affordability for Houston-The Woodlands-Sugarland's first-time buyers in 4Q2022. Table 20 shows the maximum home price affordable by family income and home-purchasing power. For example, households earning between $\$ 27,750$ and $\$ 44,300$ annually (i.e., between 31 and 50 percent of median family income) could afford a maximum home price between $\$ 83,250$ and $\$ 132,900$ with a home price-to-income multiplier of 3 . Meanwhile, the range in the maximum home price affordable to that range in household income rises to between $\$ 111,000$ and $\$ 177,200$ should the home price-to-income multiplier measure 4.

Depending on the home price-to-income multiplier, only households earning at least $\$ 45,000$ annually could afford the first-quartile sales price in 4Q2022. Homeownership is largely not feasible to households earning less than 50 percent of median family income. In fact, homeownership really only becomes viable for households earning at least 80 percent of area median income. Even at that point it largely depends on whether mortgage lenders are willing to offer loans with high home price-to-income multipliers. Moreover, few homes are available for sale at these income thresholds. For instance, with a home price-to-income multiplier of 3, only
13.7 percent of homes for sale in Houston-The Woodlands-Sugar Land were affordable to households earning no more than 80 percent of area median income in 4Q2022 (Table 21).

## Mortgage Interest Rate

Holding home price constant, the total monthly mortgage payment increases as the mortgage interest rate increases (Table 22). A 6.66 percent rate brought the mortgage payment to $\$ 2,415$ for the first-quartile sales price in 4Q2022, nearly 3 times the total monthly mortgage payment for the same home in 4Q2011.

Table 23 shows the home price-to-income multiplier by mortgage interest rate. A 6.66 percent interest rate translates into a home price-to-income multiplier of $2.99,{ }^{6}$ meaning a
${ }^{6}$ The home price-to-income multiplier is based on a 30 -year loan term, 95 percent LTV ratio, 35 percent DTI ratio, and property taxes and insurance of 4 percent.
household could afford a maximum home price of 2.99 times its annual income. The home price-to-income multiplier declines as the mortgage interest rate increases.

The income required to qualify for a loan with a 6.66 percent mortgage interest rate was $\$ 82,788$ for the first-quartile sales price in 4Q2022 (Table 24). An estimated 24.3 percent of renters in Houston-The Woodlands-Sugar Land could afford the first-quartile sales price in 4Q2022 with a 6.66 percent interest rate (Table 25), a decline of over 33 percentage points from 4Q2011.

Maps 4 and 5 show the percentage of first-time buyers who qualified for a mortgage loan with an interest rate of 6 percent in 2011 and 2022, respectively, while Map 6 shows the percent change from 2011 to 2022. The most substantial declines were in Amarillo, Killeen-Temple, DallasFort Worth-Arlington, and Sherman-Denison.

## Loan-to-Value Ratio

Holding home price constant, the total monthly mortgage payment increases as the loan-to-value (LTV) ratio increases (Table 26). For a 95 percent LTV ratio, this payment amounted to $\$ 2,415$ for the first-quartile sales price in 4Q2022, nearly three times the total monthly mortgage payment for the same home in 4Q2011.

Table 27 shows the home price-to-income multiplier by LTV ratio. A 95 percent LTV ratio translates into a home price-to-income multiplier of $2.99,{ }^{7}$ meaning a household could afford a maximum home price of 2.99 times its annual income. The home price-to-income multiplier declines as the LTV ratio increases.

The income required to qualify for a loan with a 95 percent LTV ratio was $\$ 82,788$ for the first-quartile sales price in 4Q2022 (Table 28). An estimated 24.3 percent of renters in HoustonThe Woodlands-Sugar Land could afford the first-quartile sales price in 4Q2022 with a 95 percent LTV ratio (Table 29), a decline of more than 33 percentage points from 4Q2011.

## DTI Ratio

A 35 percent DTI ratio translates into a home price-to-income multiplier of $2.99^{8}$ (Table 30), meaning a household could afford a maximum home price of 2.99 times its annual income. The home price-to-income multiplier increases as the DTI ratio increases.

The income required to qualify for a loan with a 35 percent DTI ratio was $\$ 82,788$ for the first-quartile sales price in 4Q2022 (Table 31). An estimated 24.3percent of renters in HoustonThe Woodlands-Sugar Land could afford the first-quartile sales price in 4Q2022 with a 35 percent DTI ratio (Table 32), a decline of more than 33 percentage points from 4Q2011.

## Property Taxes and Insurance

Holding home price constant, the total monthly mortgage payment increases as additional annual homeownership costs (property taxes and insurance) increase (Table 33). With a rate of 4 percent of home price, this payment amounted to $\$ 2,415$ for the first-quartile sales price in 4Q2022, nearly 3 times the total monthly mortgage payment for the same home in 4Q2011.

Table 34 shows the home price-to-income multiplier by the costs of property taxes and insurance. A 4 percent property tax and insurance rate translates into a home price-to-income multiplier of $2.99,{ }^{9}$ meaning a household could afford a maximum home price of 2.99 times its annual income. The home price-to-income multiplier declines as the mortgage interest rate increases.

[^5]The income required to qualify for a loan with property taxes and insurance at 4 percent of home price was $\$ 82,788$ for the first-quartile sales price in 4Q2022 (Table 35). An estimated 24.3 percent of renters in Houston-The Woodlands-Sugar Land could afford the first-quartile sales price in 4Q2022 with property taxes and insurance at 4 percent of home price (Table 36), a decline of more than 33 percentage points from 4Q2022.

## Overview of Housing Affordability

Housing affordability persistently proves one of the most salient topics in housing markets across the state. Although definitions vary, housing affordability broadly denotes the relationship between home price (or rent) and household (or family) income. ${ }^{10}$ As such, housing affordability generally reflects the two housing tenures: owner- and renter-occupied housing. However, Center economists further classify owner-occupied housing affordability into two distinct categories: purchase and repayment affordability.

This report focuses only on purchase affordability. Purchase affordability measures the ability of a household to buy a home. In other words, it reflects home-purchasing potential. Repayment affordability, on the other hand, measures an existing homeowner's ability to make timely monthly mortgage payments. While purchase affordability involves all potential homebuyers, regardless of whether a household already owns a home, repayment affordability solely involves current homeowners (i.e., only owner-occupied households).

## Measuring Purchase Affordability

The vast majority of homebuyers-86 percent in Texas in 2020-rely on mortgage financing to purchase a home. As such, purchase affordability largely acts as a function of income, wealth, and credit. These three factors typically constitute the primary determinants of a mortgage applicant's creditworthiness, or the applicant's ability to repay the mortgage loan, a factor heavily weighed by the mortgage lender in the decision to extend mortgage financing to an applicant. In mortgage financing, income, wealth, and credit materialize through the DTI ratio, LTV ratio, and credit score. ${ }^{11}$

Other factors that affect purchase affordability include the mortgage interest rate, any additional costs of borrowing mortgage capital (such as the mortgage insurance premium, which is generally charged if the LTV ratio is 80 percent or higher), and the additional costs of homeownership-property taxes and insurance.

[^6]Table 37 shows how characteristics of a mortgage loan or applicant affect the maximum home price affordable to a particular household. Holding all else equal, an increase in the loan term decreases the total monthly mortgage payment, which increases the maximum affordable home price. Meanwhile, an increase in the DTI ratio also raises the maximum affordable home price. However, an increase in the mortgage interest rate, LTV ratio, additional costs of homeownership, and additional costs of borrowing mortgage capital increase the total monthly mortgage payment, which decreases the maximum affordable home price and reduces homepurchasing potential.

Table 37. How Loan, Applicant Characteristics Affect Purchase Affordability

| Loan or Applicant Characteristics | Effect on Purchase Affordability |
| :--- | :--- |
| Mortgage interest rate | An increase in the mortgage interest rate <br> diminishes purchase affordability |
| Loan term | An increase in the loan term increases <br> purchase affordability |
| LTV ratio | An increase in the loan-to-value ratio <br> diminishes purchase affordability |
| DTI ratio | An increase in the debt-to-income ratio <br> increases purchase affordability |
| Additional costs of homeownership (property <br> taxes and insurance) | An increase in the additional costs of <br> homeownership diminishes purchase <br> affordability |
| Additional costs of borrowing mortgage <br> capital (such as the mortgage insurance <br> premium) | An increase in the additional costs of <br> borrowing mortgage capital diminishes <br> purchase affordability |

Source: Texas Real Estate Research Center at Texas A\&M University

The Center uses the home price-to-income multiplier (also known as "home-purchasing power") to find the ratio between home price and household income, or the maximum home price affordable to a household of a particular income. For example, a multiplier of 3 indicates a household could afford a home priced at three times the household's income (so, a household earning $\$ 50,000$ annually could afford a maximum home price of $\$ 150,000$ ).

The multiplier generally measures lower for conventional borrowers, a function of the lower DTI ratios that such borrowers tend to present, and higher for first-time borrowers, who depict higher DTI ratios. The home price-to-income multiplier typically measures around 3 for the repeat homebuyer, and between 3 and 4 for first-time homebuyers.

This report computes purchase affordability for both repeat and first-time homebuyers. For the repeat buyer, calculations in this report assume the prevailing mortgage interest rate
( 6.66 percent in 4Q2022), ${ }^{12} 80$ percent LTV ratio, 30 percent DTI ratio, and property taxes and insurance of 4 percent of home value. First-time homebuyers, who tend to be younger and therefore have not accumulated as much wealth or achieved peak earnings, tend to have higher LTV and DTI ratios. The lower income, wealth, and credit of first-time homebuyers generally reduces the maximum home price affordable to them. The calculations of purchase affordability for first-time homebuyers reflect the prevailing mortgage interest rate ( 6.66 percent in 4Q2022), 0.5 percent mortgage insurance premium, 95 percent LTV ratio, 35 percent DTI ratio, and property taxes and insurance of 4 percent of home value.

[^0]:    ${ }^{1}$ The first quartile reflects the lowest-priced 25 percent of homes sold in a particular geography. The first-quartile sales price represents the highest home price among those lowest-priced 25 percent of homes sold. If the price of the lowest 25 percent of homes sold ranges from $\$ 100,000$ to $\$ 150,000$, then the first-quartile sales price would be $\$ 150,000$.

[^1]:    ${ }^{4}$ The home price-to-income multiplier is based on a 30 -year loan term, 6.66 percent mortgage interest rate, 80 percent LTV ratio, and property taxes and insurance of 4 percent.

[^2]:    ${ }^{5}$ The home price-to-income multiplier is based on a 30 -year loan term, 6.66 percent mortgage interest rate, 80 percent LTV ratio, and 30 percent DTI ratio.

[^3]:    ${ }^{7}$ The home price-to-income multiplier is based on a 30 -year loan term, 6.66 percent mortgage interest rate, 0.5 percent mortgage insurance premium, 35 percent DTI ratio, and property taxes and insurance of 4 percent.

[^4]:    ${ }^{8}$ The home price-to-income multiplier is based on a 30 -year loan term, 6.66 percent mortgage interest rate, 0.5 percent mortgage insurance premium, 95 percent LTV ratio, and property taxes and insurance of 4 percent.

[^5]:    ${ }^{9}$ The home price-to-income multiplier is based on a 30-year loan term, 6.66 percent mortgage interest rate, 0.5 percent mortgage insurance premium, 95 percent LTV ratio, and 35 percent DTI ratio.

[^6]:    ${ }^{10}$ Household income reflects all households in the income distribution, including both family and nonfamily households, which consist of a householder living alone or a householder who shares his/her home with individual(s) of no relation to him/her. Meanwhile, family income includes only households in which the householder lives with at least one other related family member.
    ${ }^{11}$ There are two types of DTI ratios: "front-end" and "back-end" ratios. The front-end DTI ratio measures mortgage debt as a percentage of household income, while the back-end ratio reflects total household debt-mortgage loans, car loans, credit card loans, student loans, etc.-as a percentage of household income. Should mortgage debt equal $\$ 800$ per month and the monthly household income equal $\$ 2,400$, then the front-end DTI ratio is 30 percent. Should total household debt equal $\$ 1,200$ per month, then the back-end DTI ratio is 50 percent. This report uses the front-end DTI ratio. The LTV ratio measures the household's down payment as a percentage of the home price. A 5 percent down payment translates into a 95 percent LTV ratio.

[^7]:    ${ }^{12}$ The source for the prevailing mortgage interest rate is FRED/Freddie Mac.
